SST – Slip Stream Transport

Shown with Optional Wing, Chrome Roof Rack, Custom Paint & Flames

We have been building our SST's for over eight years now and have built many hundreds of them. They have more room than most pull behind cargo trailers, however their super light weight and super aerodynamic design make them easier to pull than most smaller trailers that are low to the ground riding in the turbulent air behind your tow vehicle.

Plus our SST's are much easier to get your stuff in and out of as they are higher and open from the side giving you easy access to all your cargo, you don't have to kneel down like on most small trailers to remove your stuff.

We have different taillight and fender configurations allowing you to match just about any tow vehicle you may have, whether it's a motorcycle, trike or car. Our unique "Fiddle Free" Air Ride Independent Suspension makes them pull like they are riding on a cloud and you don't have to continually adjust the air pressure like some other brands.
